Software Engineer with experience in the government sector. Worked on Frontend and Backend development at UPLAPH, achieving a 30% improvement in data handling and a 35% boost in web performance, resulting in a more efficient platform. Focused on building robust, scalable solutions with expertise in system integration and performance optimization

PROFESSIONAL EXPERIENCE

General Directorate of Geographic Analysis and Public Policy Improvement

Pachuca, México

Full Stack Developer

October 2025– March 2026

- Developed a unified platform of components and tools in React for managing users, data, and services of the INEGI census system, improving operational efficiency.
- Implemented continuous integration (CI) practices through frequent updates and code reviews, following the Scrum methodology using Jira, ensuring code quality before integration and deployment.
- Optimized the performance of the data and presentation layers, achieving a 30% reduction in query latency and a 35% reduction in form rendering time.
- Redesigned views to improve visual experience and usability, and implemented validations and optimized logic to make sure records were efficient and consistent in the database.
- Developed and integrated APIs for communication between frontend and backend, ensuring an efficient and structured data flow with a 30% improvement.
- Implemented authentication and access control mechanisms for secure user management within the platform.

Academic Project

Zempoala, México

Full Stack Developer

- Developed a web system and an interconnected Android application using REST APIs and Retrofit (Kotlin/Java).
- Designed and implemented client-server communication, including user management, content administration, and data validation.
- Enabled real-time data synchronization between mobile and web platforms.
- Improved access to institutional information and dissemination of academic offerings.
- Familiar with fundamental concepts of artificial intelligence and machine learning.

EDUCATION

Polytechnic University of Pachuca

Zempoala, México

Software Engineering, graduated (Degree in process)

2022 – 2026
